

DANIEL AWOFADEJU

omotunmiseawofadeju200@gmail.com | +2349169393378 | Lagos, Nigeria

PROFESSIONAL SUMMARY

AI Engineer and Software Developer focused on building practical AI-powered applications and reliable software. Experienced with Python, TypeScript, machine learning, NLP, computer vision, LLMs, and backend development. I enjoy turning ideas into useful products, solving technical problems, and continuously learning better ways to build and improve systems..

TECHNICAL SKILLS

Python | JavaScript | TypeScript | SQL | Flask | FastAPI | Node.js | REST APIs | PyTorch | TensorFlow | NLP | Computer Vision | LLMs | Git | Docker | PostgreSQL | AI Evaluation | Data Analysis | Problem Solving | Technical Writing | Communication | Teamwork

PROFESSIONAL EXPERIENCE

IT Lead | Adwolam Hotels and Suites, Lagos Nigeria

February 2024 – Present

- Led day-to-day IT and software operations, supporting the technology infrastructure, digital workflows, and business systems that kept everything running smoothly.
- Developed and maintained internal software tools that improved how the team worked and cut down on repetitive manual tasks.
- Troubleshoot hardware, software, network, and application issues as they came up, making sure technology stayed reliable and dependable.
- Managed digital records, system access, data organization, backups, and all related documentation to keep things organized and secure.
- Evaluated new technology solutions, coordinated their rollout, and identified opportunities to bring in automation and AI tools to make processes faster and smarter.

Website Manager/Digital Marketing Manager | Amazin Apparels, United Kingdom

October 2023 – February 2025

- Planned, built and managed the company website, ensuring it ran smoothly, stayed easy to use, and consistently reflected the Amazin Apparels brand.
- Created and ran all digital marketing campaigns across email, social media, SEO and paid ads, tracking budgets, measuring results and finding smarter ways to grow.
- Grew the company's online presence by producing quality content like blogs, videos, infographics and emails, while keeping a close eye on competitors and staying ahead of industry trends.
- Used data and analytics tools to understand how the website and campaigns were performing, then applied those insights to improve traffic, leads and overall results.
- Worked closely with the team and management to ensure everything published digitally, from the website to campaigns, I represented the brand and supported business growth.

EDUCATION

Bachelor of Science — Architecture

Oduduwa University Ipetumodu, Nigeria

PERSONAL PROJECTS

- Trash2Cash — AI Recycling Platform: Built an end-to-end AI platform using computer vision, CNN-based image classification, Flask backend integration, and chatbot workflows for material classification, drop-off guidance, and payout support.
- MeetingBot — AI Meeting Assistant: Developed an AI assistant that converts meeting audio into structured, actionable output using speech recognition, transformer-based NLP, transcription, summarization, and task extraction.
- T2CVision — Computer Vision System: Built a deep-learning image classifier for recyclable materials using OpenCV preprocessing, model evaluation, and simulation for automated waste-sorting.
- BERT Word Mask Predictor: Developed a Streamlit app using BERT to predict masked words and visualize attention relationships, demonstrating transformer-based language understanding.
